Report clearly.
Respond together.

User guide · web and mobile · 25 October 2026

A clear report.
A connected response.

Choose your workspace

One system; each role has a focused workspace.

Role	Entry	Work
Resident	Phone app only	Report and follow your own incidents
Rescuer (responder)	Phone app or web /assignments	Current-team assignments, progress and closed reports
Administrator	Web only: /dashboard, /admin	Verify, assign, close, manage teams and users, analytics and exports
Dispatcher and DMO	No access (retired)	Accounts and history kept; the administrator does their work

Start with the welcome screen

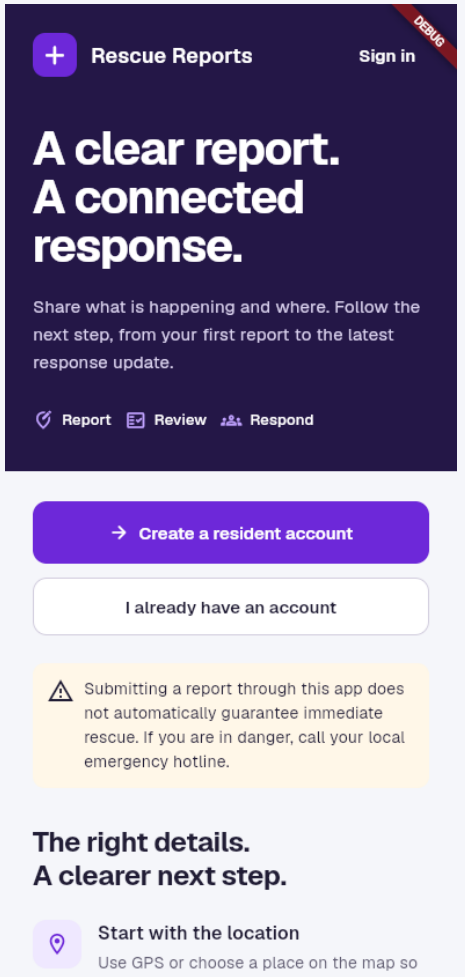

Create a resident account, or sign in with an existing account.

01 Create a resident account in the phone app.

02 Residents use the phone app only.

03 Rescuers can sign in on the phone or the website.

04 Administrators use the website only.

Send a resident report

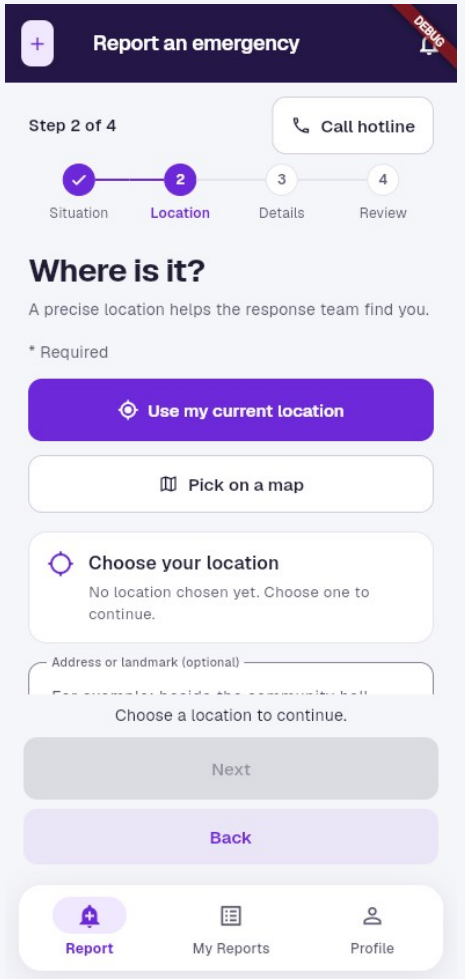

Four steps keep the location and details together.

01 Choose the emergency type.

02 Use GPS or choose a point on the map.

03 Describe the situation; add contact details and optional photos.

04 Review, submit, and keep the confirmed reference.

A lost reply is an uncertain result

Check before creating another report or update.

Keep your entries

A timeout may occur after the server saved the action.

Retry the same attempt

The existing key protects retries of unchanged content.

Review the history

Confirm what was received before explicitly discarding uncertain attempts.

Follow reports and notifications

Status history and in-app notifications explain the next step.

01 My Reports separates active and historical reports.

02 Open a report for status and progress history.

03 Use the bell to open resident notifications.

04 Push failure does not remove in-app notifications.

Review your assignments

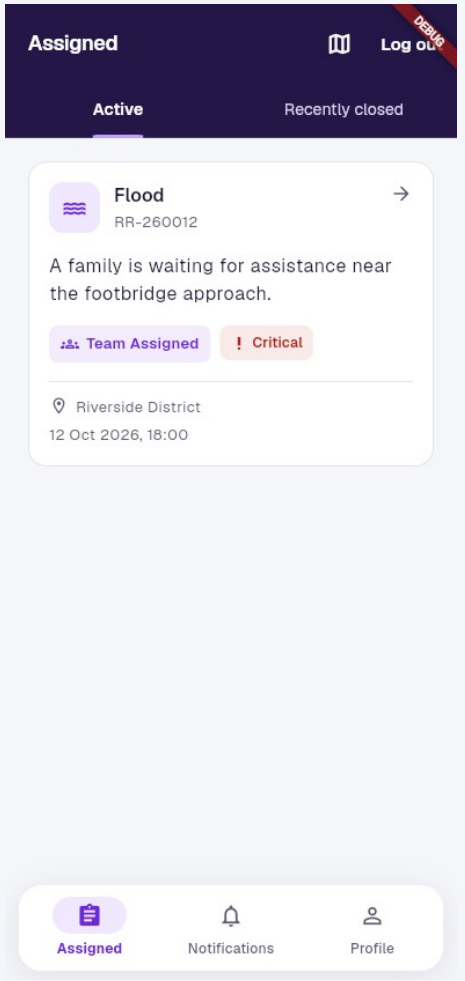

Responders see work assigned to their current team.

01 Open Assigned → Active.

02 Review the incident and its location.

03 Acknowledge the assignment.

04 Open the map handler when needed.

Record an operation update

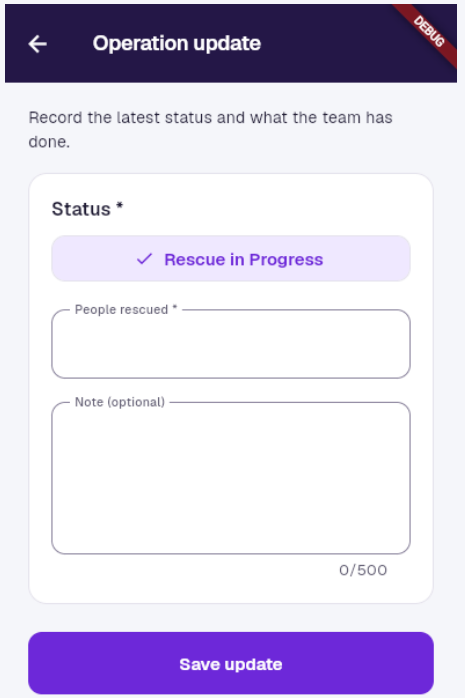

Use required fields, then wait for confirmation.

01 Choose an allowed status.

02 Enter the number of people rescued.

03 Add an optional factual note.

04 Save and confirm the new progress-history entry.

Read progress history

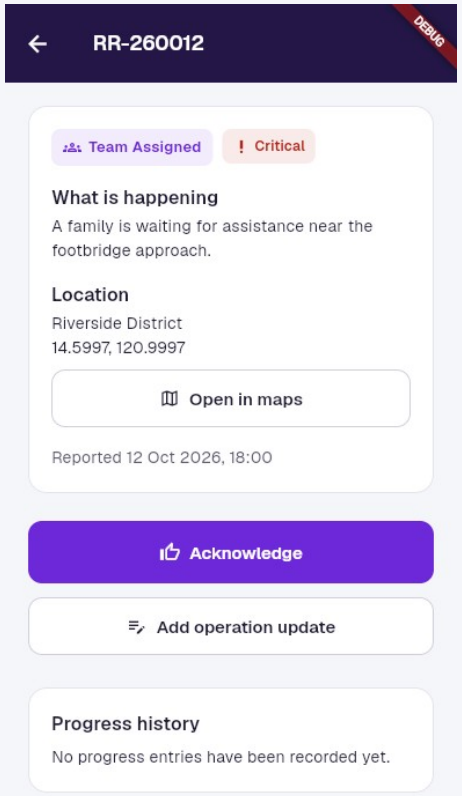

Show more reveals entries; Load older fetches the next window.

01 The newest 20 entries are fetched first.

02 Five entries are initially displayed.

03 Recently closed remains read-only.

04 Access changes clear protected history and drafts.

Work from the website

Administrators and rescuers have web workspaces. Residents do not.

Administrator

Queue → validate → prioritize → assign → close. Teams, users, analytics, exports.

Rescuer

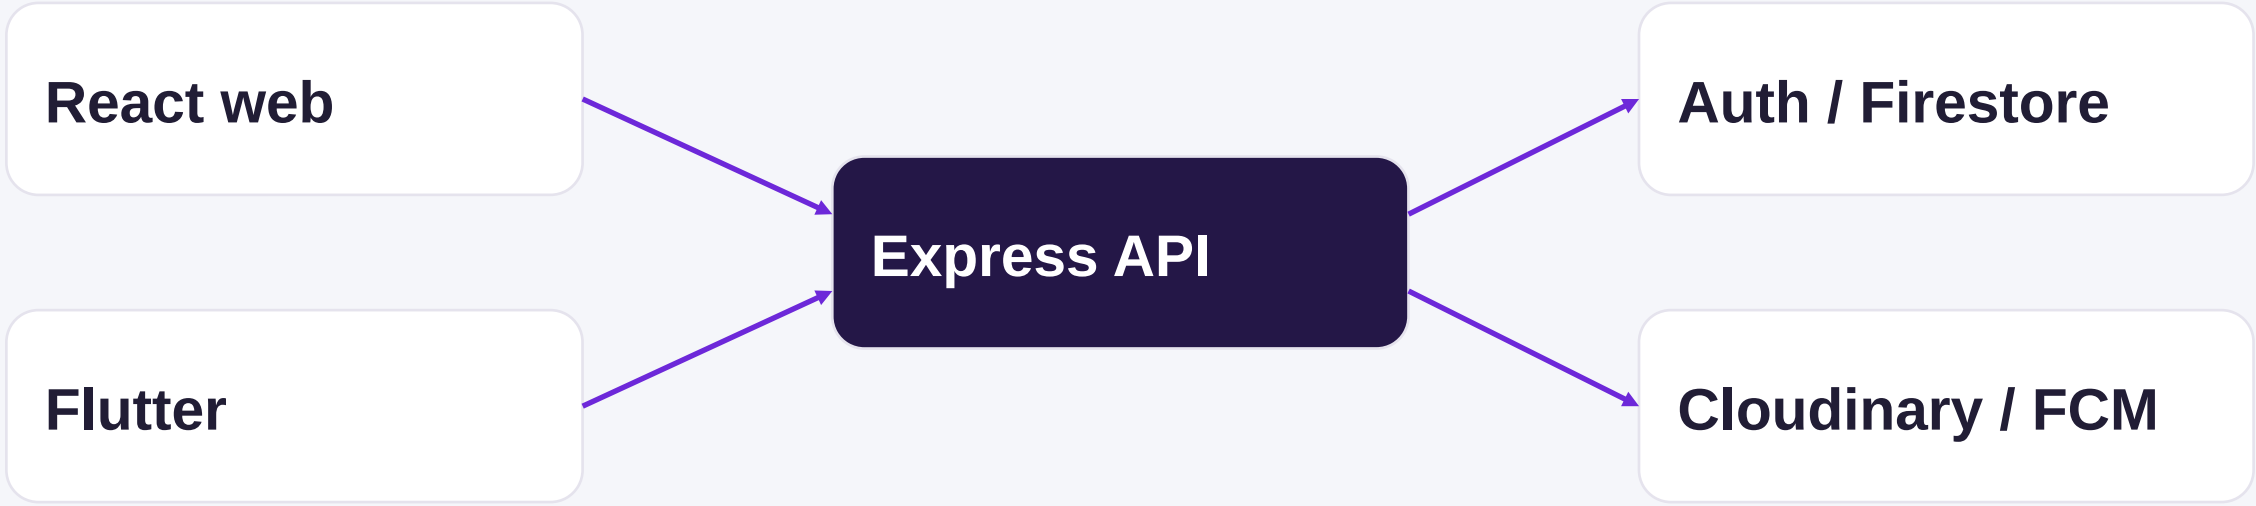

Your team’s assignments and closed reports. Post progress as on the phone.

Dispatcher and DMO

Retired. Sign-in is refused; the administrator does this work.

One backend, two clients

Operational writes use the API; reads follow Firestore permissions.

Before the final presentation

Keep claims tied to evidence and real ownership.

01 Open the PowerPoint and review the final rendering.

02 Combine web/mobile footage with architecture and group narration.

03 Each member records their actual contribution.

04 Approve hotline, policy, support and native signing details.
